

Convergents Maintainer Framework by Masscollabs

Convergents Maintainer Framework by Masscollabs

- “Cloud” is our priority and we have to connect all devices over a “private” or “public” network.
- While connecting all devices we need maintainers who will maintain the hardware and software
- So we are building a project for Coreboot and Libreboot devices and for all devices “Free as in Freedom”. Which is licensed mainly for our services AGPLv3+ and other Copyleft and Permissive licenses will play together in the same framework.

Convergents Maintainer Framework by Masscollabs

- What we expect from this framework is to speed up the development and administration for the Internet Cyberspace.
- And we will put this framework in each team and subteam for our projects. That is why we say it “cmf” “convergents” “convergents maintainer framework”
