

Procyberian Systems Distribution

The last and up to date state of PSD

We are ready for contributions to the cyberspace and public. But we wait for a couple of weeks to end up our alpha stage of general project process.

We can create an ISO for our PSD distribution and we will. But we want to make a better opportunity for us and everyone. Like a better framework and toolkit for data security, OS installation etc...

Thanks for being here and taking your part of this lovely adventure and challenge...

happy hacking !
