QB Networks & Masscollabs Services

Challenge Everything !

QB Networks & Masscollabs Services
Building the core team

- System, Network and Database administrators(in short admins)

- Developers(software engineers in general but focused on Systems Programmers)

- Security Researchers(penetration tester, reverse engineering)

- Artists(For who use software for their art works)

- Scientists(academicians)

- Translators(for communication and documentation)

- Lawyers(for licensing and other issues)

QB Networks & Masscollabs Services
How we work together

- We have a collective approach for teamwork. All members work together three hours in a day collectively.

- Then they have free time for their other research for our community and other communities or their personal skills.

- Every Week we contribute to Free Software Directory
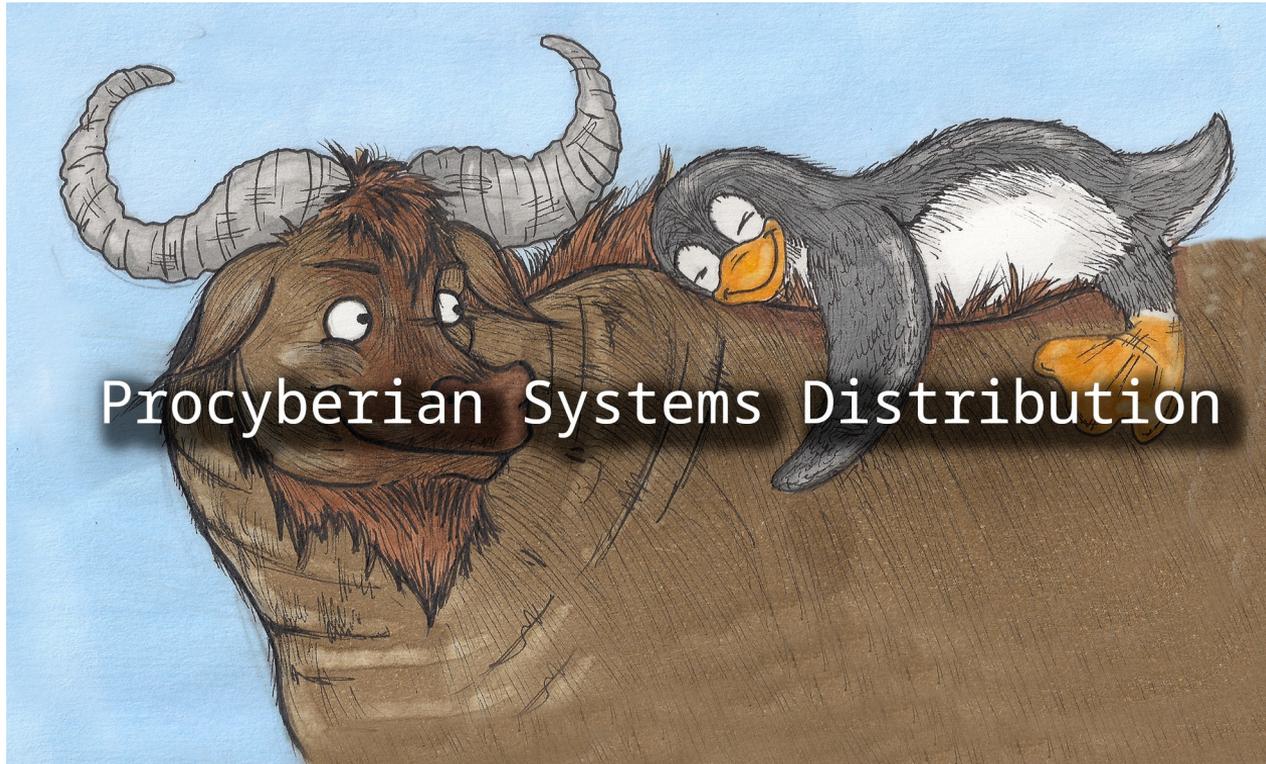

- We are coding a fully Free Software Operating System called PSD(Procyberian Systems Distribution) which is based on Debian GNU/Linux.

- We are a community for other communities and we are a company for other companies. This is our culture and motto.

- We contribute to Public and also contribute back to Debian. For our devices and software we never hide any piece of information from Public and Debian Community.
